

Attaching the Chuck Key Holder to the Drill and the Key

Please be sure to unplug the tool before performing this procedure.

Step 1: Lay the chuck key holder flat on the table.

Step 2: Place the cord plug end of the cord on the center of the chuck.

Step 3: Fold the key holder around the cord and insert the pronged end into the slit on the other end of the key holder. It is best to fold the end with ears and insert both ears at the same time as shown. This may be a little difficult but it does go through.

Step 4: Once you have both ear through, it should look like this and you are ready to attach the chuck key

Step 5: Insert the long end of the chuck key into right ear of the chuck key holder.

Step 6: Finally, insert the short side of the chuck key into the left ear. This will be difficult to do as well, but as you can see, it is possible.
